

GibbsCAM® Takes First Place

at the 17th Skills Canada Nationals Competition

Quebec City, QC - June 1st to 4th, 2011 – CAM Solutions Inc in partnership with Gibbs & Associates are proud to announce the results of the 17th Skills Canada National Competition that took place in June 2011.

The category of CNC Machining registered a total of ten competitors; two of which programmed in GibbsCAM, the remaining eight in MasterCAM. It comes as no surprise to GibbsCAM users that the two competitors programming in GibbsCAM took First and Second Place. We would like to extend our **CONGRATULATIONS TO ANDREW HALLMANN OF RED RIVER COLLEGE**, Winnipeg, MB who secured **FIRST PLACE**. With the support of the educational partnership between Red River College and CAM Solutions, an environment of success can be cultivated for students like Andrew. Congratulations also to **TONI DUECK OF THE NORTHERN ALBERTA INSTITUTE OF TECHNOLOGY (NAIT)**, Sherwood Park, AB for **PLACING SECOND**. A teacher who attended the competition was heard saying **"It's NOT FAIR, GIBBSCAM IS WAY EASIER TO USE"**. Whether in the Educational or Industrial sector, Gibbs users worldwide will attest to the quality of the product and its ease of use.

For more information on the competition please visit www.skillscanada.com

Easy to learn and use: GibbsCAM was designed by machinists so it is extremely familiar to machinists. And because of this, new users are up and cutting parts using GibbsCAM only after a couple of days, rather than the weeks or months ramp-up of other systems. GibbsCAM is not cluttered with unnecessary complexity but is laid out in a way that makes sense from a machinist's orientation. GibbsCAM's ease of use extends into day-to-day efficiencies which allow you to get your work done proficiently with a more polished tool path.

Once you've experienced GibbsCAM's natural graphical interface, you'll understand just what all the fuss is all about. With GibbsCAM, not only can you support the broadest range of machine tools but you will have the capability to take on the toughest machining jobs with the style of operation flexibility to do them in the order that you want to do them. It's time to integrate this prize winning software at your shop or school and become a leader in production manufacturing.
